EDUCATION

Carnegie Mellon University

Master of Science in Biomedical Engineering - Research

Pittsburgh, PA

May 2026

Massachusetts Institute of Technology

Bachelor of Science in Engineering as directed by Mechanical Engineering department
Concentration in Learning Machines and Physical Systems, Minor in Computer Science

Cambridge, MA

June 2023

SKILLS

Programming Languages/Tools: Python, C++, Julia, MATLAB, C, C#, JavaScript, HTML, Java, Max, Verilog, RISC-V, SQL, HDF5, Git, Shell/Bash, REST APIs, Arduino, Unity, VS Code/Cursor, Jira/Atlassian

Computing Systems/Domains: Artificial Intelligence, Machine Learning, Computer Vision, Voice Recognition, Quantum Computing, XR Development, Web Development, Multithreading, Algorithm Design, Signal Processing, Audio Engineering

Design & Manufacturing: Computer-Aided Design (CAD), CNC Mill & Lathe Operation, FDM 3D Printing, Soldering & Electronics, Basic Circuit Design, Power Tools, Dynamic Systems & Controls

EXPERIENCE

ASC Compliance

Full Stack Web Developer

January 2026 - Present

- Designed and implemented web application and online learning management system using React, Next, and Google Cloud Platform in order to train/certify over 500 surgical center staff and ensure compliance with Medicare regulations

PUNKU.AI

AI Software Engineer

August 2024 - August 2025

- Developed Python/TypeScript interfaces for large language models in a web application allowing customers to build custom AI Agents and chatbots for business management; deployed/shipped AWS app in an agile/scrum environment

Gordon-MIT Engineering Leadership Program

Engineering Leadership Laboratory Teaching Assistant

September 2023 - May 2024

- Collaborated with instructional staff to design and teach a two-year technical leadership development program at MIT
- Crafted OCR-based text parsing Python software to mine data correlating academic and professional trajectories

MIT Division of Student Life

Summer Desk Worker, Housing and Residential Services

May 2023 - August 2023

- Created and deployed a suite of Google apps to digitize and partially automate resident management across three MIT residence halls; personally monitored/facilitated residence hall operations and maintenance

MIT Media Lab

Undergraduate Researcher, Nano-Cybernetic Biotrek Group

May 2022 - September 2022

- Engineered and tested computer vision tools using ImageJ, Python, and MATLAB in order to analyze nanoelectronic devices and neural cells from 2D and 3D microscope images to further neuromodulation research

Massachusetts General Hospital Department of Radiation Oncology

Undergraduate Researcher

June 2021 - September 2021

- Constructed a digital model of a small animal radiation therapy device and tested irradiation techniques using custom Monte Carlo particle simulations in order to assist a laboratory group with cancer treatment planning research

Massachusetts Institute of Technology Kavli Institute for Astrophysics and Space Research

Undergraduate Researcher

June 2020 - February 2021

- Programmed data storage and visualization software using async Python and Julia for a charge-coupled device (CCD) simulator, in order to accelerate development of such devices for future NASA X-ray astrophysics missions
 - Refactored and optimized CCD simulation software using object-oriented C++ and HDF5, reducing runtimes by 3x
-

PROJECTS

Haptically-Enabled Endovascular Telesurgery Platform

Carnegie Mellon University - Computational Engineering and Research Laboratory

November 2024 - Present

- Conducted literature review on connectivity and latency in robotic surgery, resulting in a submitted journal publication
- Developed a technological ecosystem for remote endovascular surgical procedures, comprising a virtual reality app in C#/NET & Unity, haptic gloves for tactile feedback, and a PID-controlled robot actuating a catheter guidewire

RoboResponse: An AR-Enabled Teleoperation Solution for Remote CPR

Massachusetts Institute of Technology - Introduction to Robotics Student

February 2023 - May 2023

- Directed a graduate student team to engineer an AR teleoperation system for CPR administration using Microsoft HoloLens, a UR5 robotic arm, and a custom unmanned vehicle for a robotics competition; presented combined teleoperation system to academic and military (USSOCOM) representatives
